ScanDrive®:

A strong link in every production chain

The ScanDrive® Maintenance-free Drum Motors and rollers are compact, powerful and robust, they provide optimal performance in any situation and condition.

The diversified range of Drum Motors are designed to tackle even the most difficult challenges in unit load handling applications. Our motorised drums are built to keep your production clean and running at its best. The motor is completely enclosed and external shafts are always fixed.

ScanDrive Motorised Drums, offered by Stevens Belting, can reduce your running costs and help meet the increasing demands for energy efficient production. Our Drums benefit from a very high mechanical efficiency (up to 97%) and power consumption is significantly lower than a traditional gear solution.

Regardless of Industry, ScanDrive® can deliver

Our Motorised Drums are the world's most hygienic with an IP 69 K rating and can withstand high pressure cleaning. We can also offer fast delivery from stock in Denmark and customise production depending on your demands.

In some industries, compatibility with small spacial requirements may be paramount, in others food-grade conformity or harsh operating conditions may be the driving factor. We offer three primary Series of Drum Motors, with different properties, that can deliver for your application.

- Compact Series** — Ideal for applications with space limitations, this Series offers high efficiency and low-noise operation.
- Hygienic Pro Series** — Constructed with 304 Stainless Steel and with the highest IP Protection Rating, the Series complies with high standard food-grade requirements.
- MaxDuty Series** — The MaxDuty Series, as the name suggests, is suitable for conveying high loads and in harsh operating conditions.

SAFE PRODUCTION
Built with safety and efficiency in mind

ROBUST AND RELIABLE
Performs consistently across a wide range of sectors

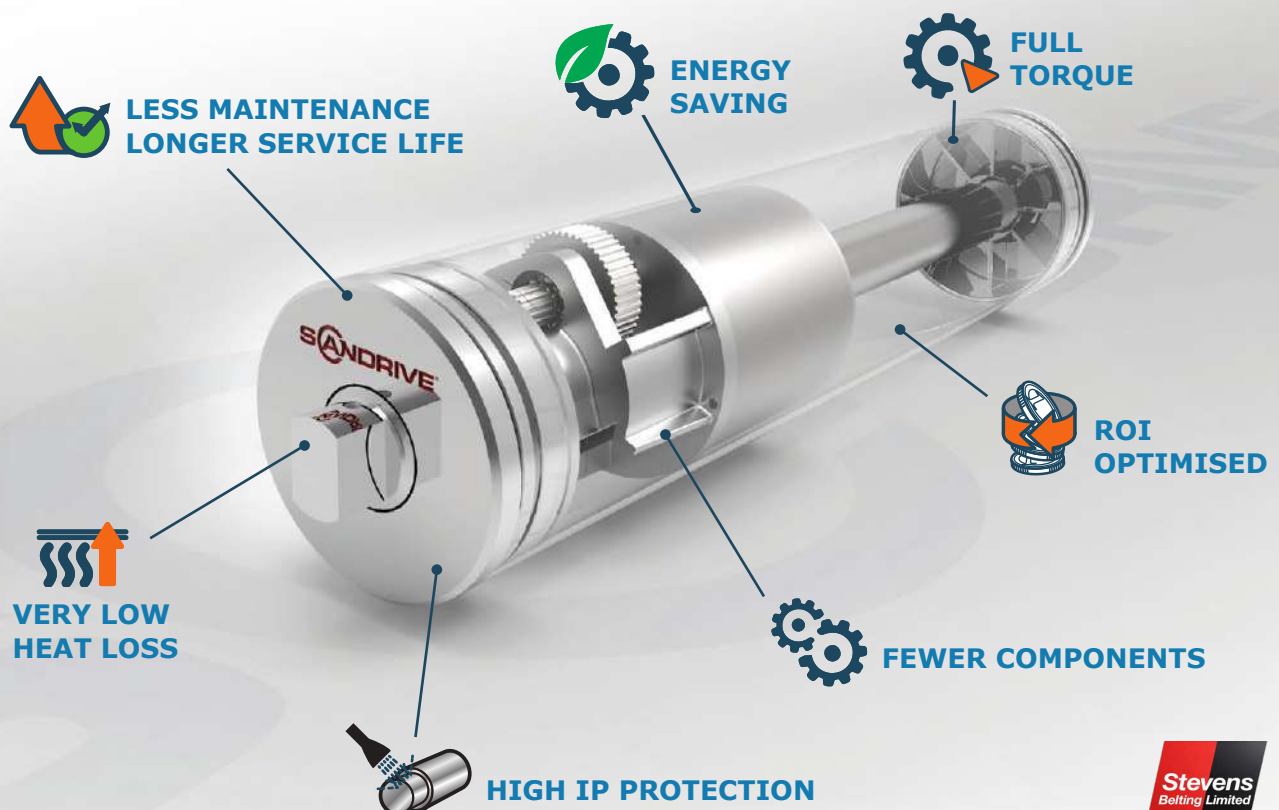

SAFE AND CLEAN
Easy-to-clean up to IP69K stainless steel construction

Quality, Reliability and Experience

The ScanDrive® range has been engineered to deliver products with unrivalled quality and reliability.

30+ years of industry experience in Denmark and 45+ years of belting knowledge at Stevens, make us a partner that you can be confident in. Our Drum Motors offer the security of consistent, dependable, high-quality performance.

- An optimised asynchronous motor significantly reduces energy consumption and delivers reliable performance. Oil cooling enhances efficiency and extends service life.
- Continuous high torque is achieved from a smooth and stable starting torque, rotor slip and efficient heat dissipation.
- The oil bath reduces motor and gearbox heat, ensuring stable operation.
- With IP 69K sealing, the motor is resistant to high-pressure cleaning, moisture and dust.
- Maintenance requirements are minimal due to high stress and temperature resistance.
- Fewer external components results in faster installation and fewer points of failure.
- Low operating costs and long service life provide economic value from day one.
