Transmission Belting

High efficiency synthetic flat belts are currently used in all areas of power transmission, with their light weight construction they lend themselves to being versatile and reliable, with the added benefit of high levels of energy saving.

Traditional Leather belting is still very popular, Chrome Leather for instance, when adhered to a polyamide traction layer offers a belt with a rugged construction and simple joint technology via glues or a fitted fastener.

Full technical back up is available via a comprehensive range of literature or by consulting one of our technical representatives, who will be only too pleased to advise and assist you to making the best selection for your particular application.

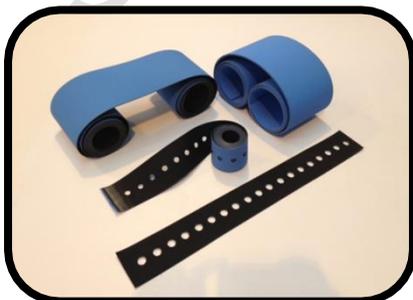

All High duty flat belts are manufactured with a very strong traction layer made from a choice of materials such as Polyamide, Polyester, Nylon or Aramide, couple this with NBR – Rubber top covers which provide a very high degree of friction and you have an extremely efficient solution to your transmission requirements.

Through a wide selection of high friction rubber covers with different surface structures it is possible to offer an oil and chemical resistant belt with long life.

High strength core members make our belts operate extremely efficiently, thus reducing power consumption and facilitating the use of narrower belts than traditional materials.

We also stock traditional materials such as Leather and Rubber, please contact us to discuss your requirements in more detail.

All types of hole perforations are available, with many standard patterns being available 'off the shelf'.

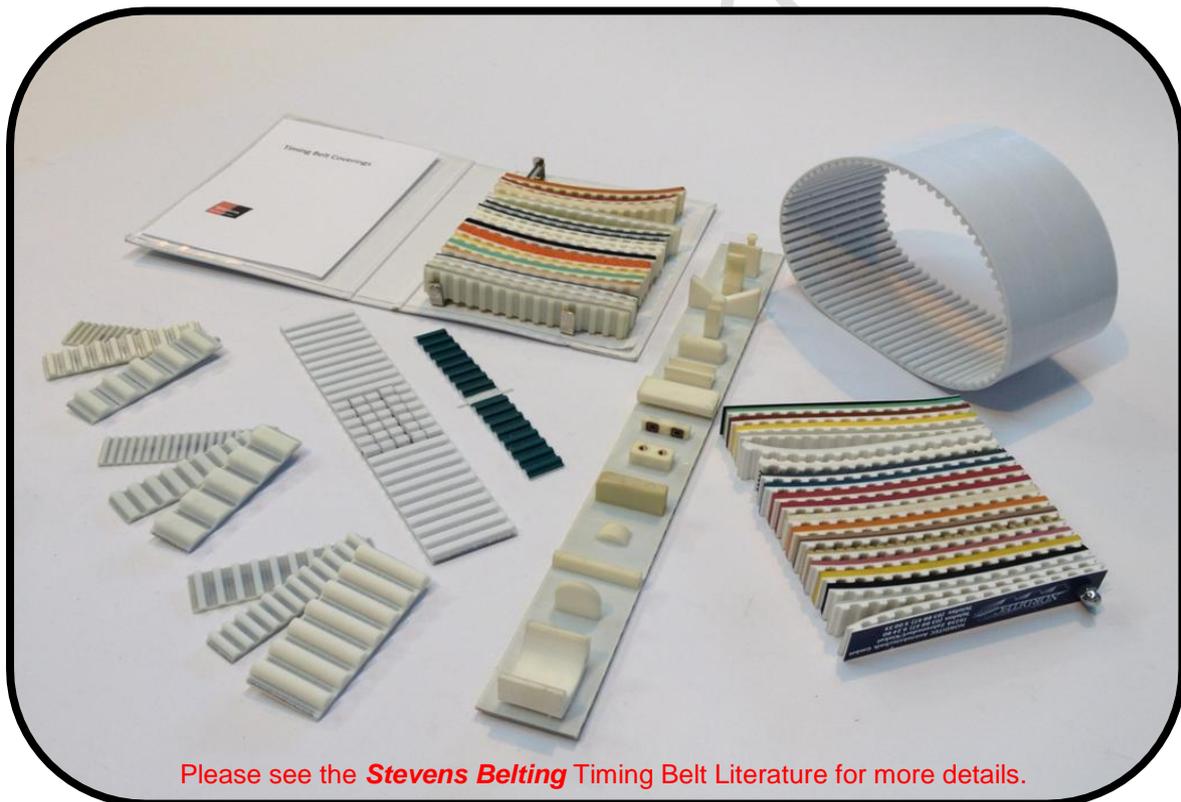

Please contact us to discuss your requirements.

Vee Belts and Timing Belts.

Styles such as Classic vee belts to the most advanced toothed belts are all either stocked or available within a short timescale.

Specialist belts are available such as extruded polyurethane and variable speed, all with numerous patterns and styles. Enquire as to your particular requirements.

Please see the **Stevens Belting** Timing Belt Literature for more details.

At **Stevens Belting Limited** we are happy to discuss all your requirements either by phone; 0121 271 0047 or via email; info@stevensbeltingltd.co.uk please do not hesitate to contact us and we will be pleased to quote our best price and delivery.
